Answer to question: On a scale of 1 (lowest) to 5 (highest), how much do you prefer using jQuery over JavaScript alone? Why?

A: I like JavaScript more than jQuery, so I'd give jQuery a 2 out of 5. JavaScript feels like coding in Java or Python, which I'm used to, with stuff like loops and functions. jQuery's \$ thing and commands like \$("#id").html() are weird to me and not like normal coding. Also, I don't like that I have to add a jQuery link from the internet when JavaScript just works. jQuery might be shorter sometimes, but I find JavaScript easier to understand right now.
