Were there any problems in this assignment you could not complete?

No.

What was the most challenging part of this assignment for you – and why?

In Problem 4 (js4.html), the tricky parts were:

1. **Making sure the range worked both ways** - I had to use `Math.min()` and `Math.max()` to handle when someone enters the larger number first, then the smaller number.
2. **Keeping track of two different things in the same loop** - I needed to find odd numbers AND calculate the sum of ALL numbers. At first I was confused about whether the sum should be just odd numbers or all numbers in the range.
3. **The modulus operator logic** - I had to think carefully about `i % 2 != 0` to identify odd numbers. Sometimes I'd mix up whether 0 meant even or odd.
